RESTASSURED API AUTOMATION PROJECT

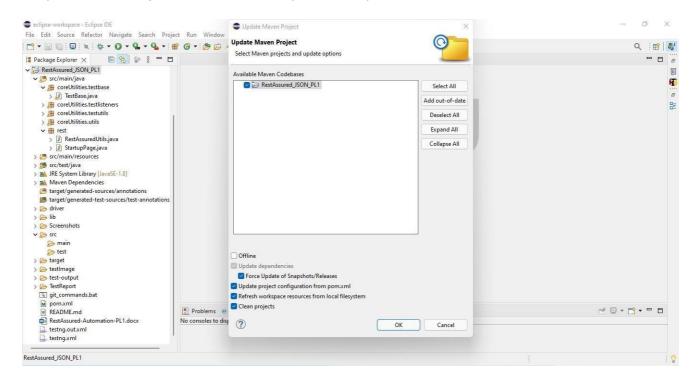

Pre-requisite:

As soon as you import a project in eclipse, update the project using the maven update option as below. This is to resolve issue if any maven dependency not downloaded properly:

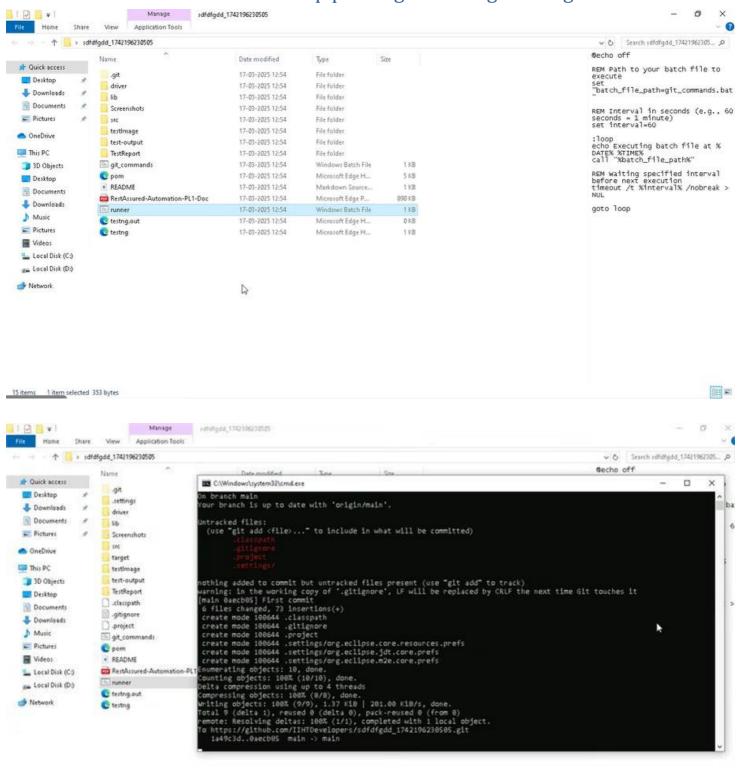

1. Right click on project : Go to "Maven" : Select "Update Project"

2. In Update Maven Project Box Select "Force Update of Snapshots/Releases" and click OK

** Before starting any implementation. Please execute this "runner" file present in the cloned folder. This will keep pushing the changes at regular intervals.

Red to

Template Code Structure:

- a. Below are the packages and files you will be required to work upon.
- b. Other Files and packages you can ignore.
- c. In other Files and packages do not do any changes. It would affect your evaluation.
- d. You are not required to work in "Test" Folder. Files there are noneditable. Editing those files and trying to save them will throw error and would affect your evaluation.

Package	Class/File	Description
src/main/java/coreUtilities/utils/	FileOperations.java	 Contains methods to read from excel file. Method is in templated form.
		3. You will be required to implement these methods as very first activity, because for creating post the data should be read from excel.
/src/main/java/rest	ApiUtil.java	 All core activities to be performed here.
		2. The comments associated with each templated method here describe the expectation.
		3. Declare any variable/object you need to share data/status between different methods.
		4. Do not modify the signature of methods declared here.
		5. You can create additional supportive common methods in CommonEvents class.
/src/main/java/rest	AuthUtil.java	Class already defined to read and return bearer token from

		config.properties file.
/src/main/java/rest	CustomResponse	We have already created custom response object class. You need to use this and use it as return type from ApiUtil.java class methods.
/src/main/resources/	Config.xlsx	Data present to be used in Implementing functions.
/src/main/java/coreUtilities/utils	CommonEvents.java	 Contains all common activities. Certain templated common methods declared here. You implement them as per your need. You can add any additional method for common activity here
	Testng.xml	Execution needs to kick started from TestNG xml

Need to automate the following activities using RestAssured.

Key Activities to implement:

Below activities need to be implemented in the ApiUtil.java file present in src/main/java/rest package.

SI	Summary	Action	Expected Result
No.	-		
1	Create an Appointment with Authorization in Method: createAppointmentWithAuth(String endpoint, String body)	1.Create an URL by combining the BASE_URL (already declared) and path parameter (provided as an argument in method). The final URL becomes as follows: https://healthapp.yaksha.com/api/Appointment/AddAppointment	- Returns an object of type CustomResponse containing statusCode, status, AppointmentId and the complete Response object. - StatusCode should be 200.
		 The body required as the part of request is passed in requestBody variable in method argument. Include a bearer token for authentication in authorization header. Trigger a POST call. Create an object of type CustomResponse and initialize it with values extracted from the Response object: Response statusCode (extracted from Response object) Status (extracted from Response object) AppointmentId (extracted from Response object) Return the CustomResponse object from the method. 	- Status should be OK. - AppointmentId should not be null.

2	Cancel an Appointment with	1. Call the PUT on endpoint i.e	- Returns an object of type
	Authorization in Method:	https://healthapp.yaksha.com/ap	CustomResponse
		i/	containing statusCode,
	cancelAppointmentWithAut	Appointment/AppointmentStatus	status, Results and the
	h (String endpoint, Object body)	?appointmentId=+ appointmentId+	complete Response object.
		"&status=cancelled"	- StatusCode should be 200.
		2. Include a bearer token for authentication in authorization header.3. Trigger a PUT call.	- Status should be OK.
		4.Create an object of type CustomResponse and initialize it with values extracted from the	
		Response object:	
		Response	
		 statusCode (extracted 	
		from Response object)	
		Status (extracted from	
		Response object) Results as a string	
		(extracted from Response	
		object)	
		5. Return the CustomResponse object	
		from the method.	
3	Search for a Patient with	1. Call the GET on endpoint i.e	- Returns an object of type
	Authorization in Method:	https://healthapp.yaksha.com/api/	CustomResponse
	searchPatientWithAuth(Stri	/Patient/SearchRegisteredPatient?s	containing statusCode, status, Results and the
	ng endpoint, Object body)	earch=Test	complete Response object.
	ing emaporate, object body)	2. Include a bearer token for	complete Response object.
		authentication in authorization header.	- StatusCode should be 200.
		3.Trigger a GET call to the specified endpoint.	- Status should be OK.
		4.Create an object of type	
		CustomResponse and initialize it	
		with values extracted from the Response object:	
		Response	
		statusCode (extracted from	
		Response object)	
		Status (extracted from	
		Response object)	
		Results as List <map<string, objects=""> (outrasted from</map<string,>	
		Object>> (extracted from Response object)	
		5. Return the CustomResponse object	
		from the method.	
L	1		

4	Retrieve a List of	1. Call the GET on endpoint i.e	- Returns an object of type
	Appointments for a	https://healthapp.yaksha.com/api/	CustomResponse
	Specified Performer in	/Appointment/Appointments?From	containing statusCode,
	Method:	Date=" + dateFiveDaysBeforeStr	status, Results and the
		+ "&ToDate=" + currentDateStr	complete Response object.
	bookingListWithAuthInRang	+ "&performerId=" +	
	e(String endpoint, Object body)	performerId + "&status=new"	- StatusCode should be 200.
		2. Include a bearer token for	- Status should be OK.
		authentication in authorization header.	
		3. Trigger a GET call to the specified	
		endpoint.	
		4.Create an object of type	
		CustomResponse and initialize it	
		with values extracted from the	
		Response object:	
		Response status Goda (sutrepted from	
		statusCode (extracted from Response chiest)	
		Response object) • Status (extracted from	
		Response object)	
		Results as List<map<string,< li=""></map<string,<>	
		Object>> (extracted from	
		Response object)	
		5. Return the CustomResponse object	
		from the method.	
5	Retrieve Main Store Details	Call the GET on endpoint i.e	- Returns an object of type
	in Method:	https://healthapp.yaksha.com/api	CustomResponse
		/PharmacySettings/MainStore	containing statusCode,
	MainStoreDetailsWithAuth(2. Include a bearer token for	status, Results and the
	String endpoint, Object	authentication in authorization	complete Response object.
	body)	header.	
		3.Trigger a GET call to the specified endpoint.	- StatusCode should be 200.
		4.Create an object of type	- Status should be OK.
		CustomResponse and initialize it	
		with values extracted from the	- Name, storeDesc and
		Response object:	StoreId should not be null.
		 Response 	
		 statusCode (extracted from 	
		Response object)	
		 Status (extracted from 	
		Response object)	
		Results as Map<string, object=""></string,>	
		(extracted from Response object)	
		5. Return the CustomResponse object	
		Si netarii tire castoriintesponse object	

6	Retrieve a List of Pharmacy	1. Call the GET on endpoint i.e	- Returns an object of type
	Stores in Method:	https://healthapp.yaksha.com/api	CustomResponse
		/Dispensary/PharmacyStores	containing statusCode,
	PharmacyStoresWithAuth(2. Include a bearer token for	status, Results and the
	String endpoint, Object	authentication in authorization	complete Response object.
	body)	header.	, , ,
	,,	3.Trigger a GET call to the specified	- StatusCode should be 200.
		endpoint.	
		·	- Status should be OK.
		4.Create an object of type CustomResponse and initialize it	
		•	- Storeld, and Name should
		with values extracted from the	not be null.
		Response object:	Hot be hull.
		Response Asstructed from	
		statusCode (extracted from	
		Response object)	
		Status (extracted from Page 200 a big at)	
		Response object)	
		Results as List <map<string, (submated="" attack="" from<="" ohio="" th=""><th></th></map<string,>	
		Object>> (extracted from	
		Response object)	
		5. Return the CustomResponse object	
		from the method.	
7	Activate a Pharmacy	1. Call the PUT on endpoint i.e	- Returns an object of type
	Counter Using Details in	https://healthapp.yaksha.com/api	CustomResponse
	Method:	/Security/ActivatePharmacyCounter	containing statusCode,
		?counterId=" + counterId +	status, Results and the
	ActivatePharmCount(String	"&counterName=" + counterName	complete Response object.
	endpoint, Object body)	2. Include a bearer token for	
		authentication in authorization	- StatusCode should be 200.
		header.	
		3.Trigger a PUT call.	- Status should be OK.
		4.Create an object of type	
		CustomResponse and initialize it	- CounterName, and
		with values extracted from the	CounterId should not be
		Response object:	null.
		 Response 	
		 statusCode (extracted from 	
		Response object)	
		Status (extracted from	
		Response object)	
		Results as Map<string, object=""></string,>	
		(extracted from Response	
		object)	
1		5. Return the CustomResponse object	
		or metarin the custominesponse object	
		from the method.	

8	Deactivate a Pharmacy	1. Call the PUT on endpoint i.e	- Returns an object of type
	Counter in Method:	https://healthapp.yaksha.com/api	CustomResponse
	Counter in Method	/Security/DeactivatePharmacyCount	
	DeactivatePharmCount(Stri	•	status, Results and the
	ng endpoint, Object body)	er	complete Response object.
		2. Include a bearer token for	complete Response object.
		authentication in authorization	- StatusCode should be 200.
		header.	- Statuscode silodid be 200.
		3.Trigger a PUT call.	Chatria ah a idal la a OK
		4.Create an object of type	- Status should be OK.
		CustomResponse and initialize it	
		with values extracted from the	
		Response object:	
		Response	
		statusCode (extracted from	
		Response object)	
		Status (extracted from	
		Response object)	
		Results as Map <string, object=""></string,>	
		(extracted from Response	
		object)	
		5. Return the CustomResponse object	
		from the method.	
9	Retrieve Appointment	1. Call the GET on endpoint i.e	 Returns an object of type
	5 5	https://beelthemp.velehe.com/out	C
	Applicable Departments in	https://healthapp.yaksha.com/api	CustomResponse
	5 5	/Master/AppointmentApplicableD	containing statusCode,

		authentication in authorization header.	- StatusCode should be 200.
		3.Trigger a GET call to the specified endpoint.	- Status should be OK.
		 4.Create an object of type CustomResponse and initialize it with values extracted from the Response object: Response 	- Employeeld, FirstName and LastName should not be null.
		 statusCode (extracted from Response object) Status (extracted from Response object) Results as List<map<string,< li=""> </map<string,<>	
		Object>> (extracted from Response object) 5. Return the CustomResponse object	
		from the method	

NOTE: "Please do not delete any file in the src folder. But you are free to add any other file".

Expectations:

- 1) Learners should write automation scripts using Java and REST Assured to automate the API testing for all the provided methods (e.g., GET, POST, PUT, DELETE). In other words, the automation script should perform all mentioned API interactions, including validation of responses.
- 2) Learners should not use any pre-built libraries or tools to validate API responses (e.g., JSON schema validation tools). They should manually validate the response content (e.g., status codes, response body, etc.) by writing their own logic for assertion.

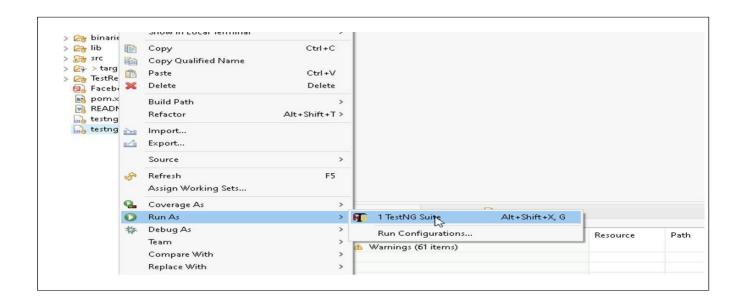

IMPLEMENTATION/FUNCTIONAL REQUIREMENT

1.1 CODE QUALITY/OPTIMIZATIONS

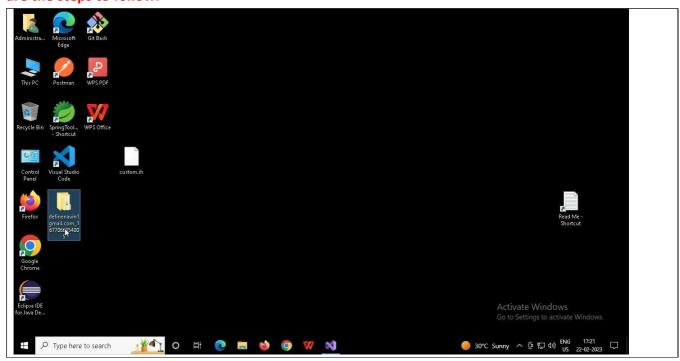

- 1. Associates should have written clean code that is readable.
- 2. Associates need to follow SOLID programming principles.

EXECUTION STEPS TO FOLLOW

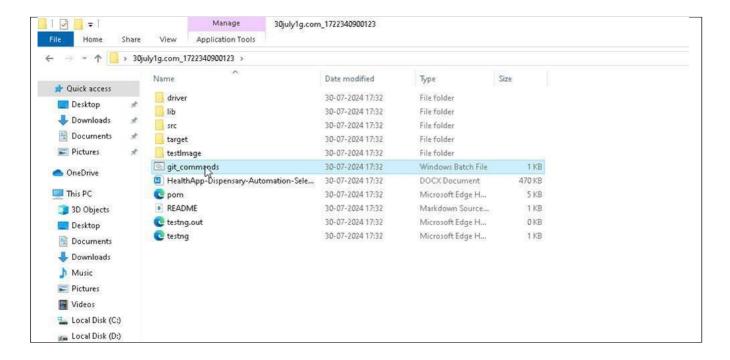

- 1. You are mandatorily required to run test cases for applications before final submission. Without which project evaluation will not happen.
- 2. You can launch test cases any time as follows: Right click on testng.xml and run TestNGSuite

3. Before final submission, you are also required to push your code to GIT. Following are the steps to follow:

In your project folder, you will find a batch file named git_commands

Double-click the batch file to run it. It will run the commands to push your code to GIT.
